

Choose plants that do not create Fuel Ladders. Break up plantings in a mosaic like pattern.

1. Use hardscape features such as patios (shown) , walkways etc. directly against the structure to add space between flammable vegetation and the structure.
2. Eliminate vertical continuity by choosing plants that reach a mature height of less than 2 feet beneath all medium and large trees. Use plants less than 8" at maturity beneath small trees.

Note: Example only, Liquidambar are not allowed in Zone A.
